Milestones Supplemental Guide

This document provides additional guidance and examples for the Clinical Cardiac Electrophysiology Milestones. This is not designed to indicate any specific requirements for each level, but to provide insight into the thinking of the Milestone Work Group.

Included in this document is the intent of each Milestone and examples of what a Clinical Competency Committee (CCC) might expect to be observed/assessed at each level. Also included are suggested assessment models and tools for each subcompetency, references, and other useful information.

Review this guide with the CCC and faculty members. As the program develops a shared mental model of the Milestones, consider creating an individualized guide (Supplemental Guide Template available) with institution/program-specific examples, assessment tools used by the program, and curricular components.

Additional tools and references, including the Milestones Guidebook, Clinical Competency Committee Guidebook, and Milestones Guidebook for Residents and Fellows, are available on the Resources page of the Milestones section of the ACGME website.

Patient Care 1: Atrial Fibrillation	
Overall Intent: To develop and implement a comprehensive management plan for patients with atrial fibrillation	
Milestones	Examples
Level 1 Performs a disease specific history and physical exam and develops a diagnostic plan for patients with suspected or known atrial fibrillation; identifies reversible causes of atrial fibrillation	In a patient referred for evaluation and management of atrial fibrillation, takes comprehensive symptom history and confirms diagnosis of atrial fibrillation by review of electrocardiogram (EKG) or alternative tracing
Identifies indications for stroke prevention and rate and rhythm control and modifiable risk factors for atrial fibrillation	 Lists components of CHA₂DS₂-VASc (Congestive heart failure, Hypertension, Age greater than 75 years, Diabetes mellitus, Stroke or transient ischemic attack; Vascular disease, Age 65 to 74years, Sex Category) score and HAS-BLED (Hypertension, Abnormal liver/renal function, Stroke history, Bleeding history or predisposition, Labile INR, Elderly, Drug/alcohol usage) score
Obtains vascular access, positions catheters, and performs basic electrophysiology evaluation	Demonstrates knowledge of femoral venous and arterial anatomy; obtains access and places diagnostic catheters in appropriate anatomical locations with assistance
Level 2 Selects and interprets monitoring and additional diagnostic testing for a patient with atrial fibrillation	In patient with paroxysmal atrial fibrillation of unclear burden and infrequent symptoms, chooses a monitor of sufficient duration to correlate symptoms to rhythm and assess arrhythmia burden
Identifies patient comorbidities that impact choice of therapies	In an obese patient with atrial fibrillation, obtains history of snoring and refers for evaluation for sleep apnea
Performs components of ablation procedure for atrial fibrillation, with assistance	Performs transseptal puncture with attending assistance Creates the majority of a left atrial geometry in a three-dimensional electroanatomic map
Level 3 Develops a comprehensive treatment plan for a patient with refractory atrial fibrillation and multiple comorbidities	In a patient with atrial fibrillation and chronic obstructive pulmonary disease where rate control cannot be medically achieved, discusses antiarrhythmic drug strategy, atrial fibrillation ablation, and atrioventricular nodal ablation with pacing, and elicits patient preference, with attending assistance
Individualizes pharmacologic and considers procedural therapeutic options for stroke prevention and rate and rhythm control, with assistance	Appropriately modifies oral anticoagulant choice in a patient with CHA2DS2-VASc score of 5 and renal failure after prompt from attending

Formulates strategies and performs ablation for	Performs transseptal puncture independently in most cases
atrial fibrillation, with assistance; independently	Creates left atrial geometry and formulates ablation lesion set based on patient specific
performs atrioventricular node ablation for rate	characteristics such as chronicity of atrial fibrillation, left atrial size, and prior procedures
control	• Creates portions of ablation lesion set but, in most cases, requires assistance to complete
Laval A lada and suth davalana and adapte	pulmonary vein isolation
Level 4 Independently develops and adapts a treatment plan for a patient with refractory atrial	Recognizes amiodarone induced hyperthyroidism as a cause of atrial fibrillation with rapid ventricular response and coordinates management with endocrine consult
fibrillation and multiple comorbidities	Independently identifies patients who would benefit from left atrial appendage occlusion
	and discusses risks/benefits with patient
	·
Independently individualizes pharmacologic and	Discontinues flecainide atrial fibrillation antiarrhythmic therapy in a patient with recent
procedural therapeutic options for stroke	myocardial infarction
prevention and rate and rhythm control	Discusses the benefits of surgical atrial fibrillation ablation and left atrial appendage resection for a patient with history of atrial fibrillation undergoing open heart surgery for
	coronary artery or mitral valve disease
Independently implements strategies and	Performs transseptal puncture independently and rarely needs assistance with
performs ablation for atrial fibrillation, repeat	challenging cases
ablation, and related arrhythmias	 Able to incorporate intracardiac echocardiography to all aspects of ablation procedure (Transeptal, Complication monitoring, Catheter contact)
	Completes all aspects of atrial fibrillation ablation, including pulmonary vein isolation,
	posterior wall isolation, and targeting of other non-pulmonary vein triggers of atrial
	fibrillation
Level 5 Leads interdisciplinary care efforts for	Coordinates new program for lifestyle risk reduction in patients with atrial fibrillation
patients with atrial fibrillation	
Independently selects and applies innovative	Develops protocols to improve patient follow-up after atrial fibrillation ablation
treatment protocols for atrial fibrillation	Develops protocols to improve patient follow-up after atrial horniation abiation
,	
Independently adopts novel strategies and	Brings new ablation strategy to an interdisciplinary group involving novel approach/lesion
technology in procedural treatment of atrial	set or ablation technology
fibrillation Assessment Models or Tools	Independently performs percutaneous left atrial appendage occlusion procedure
Assessment woders of Tools	Case Log Direct observation
	Multisource feedback
	• Simulation

Patient Care 2: Supraventricular Tachycardia Overall Intent: To develop and implement a comprehensive management plan for patients with supraventricular tachycardia	
Milestones	Examples
Level 1 Performs a disease specific history and physical exam and develops a diagnostic plan for patients with suspected or known supraventricular tachycardia	Recognizes supraventricular tachycardia on event monitor Describes the risks, benefits, and alternatives of supraventricular tachycardia ablation
Obtains vascular access, positions catheters, and performs basic electrophysiology evaluation	Demonstrates knowledge of femoral venous and arterial anatomy; obtains access and places diagnostic catheters in appropriate locations with assistance; performs baseline electrophysiology study with assistance
Level 2 Selects and interprets results of monitoring and additional diagnostic testing for a patient with supraventricular tachycardia	Orders an exercise stress test for a patient who has not had arrhythmia documented on event monitor, but has symptoms triggered by activity
Performs induction and diagnostic maneuvers for differentiation of supraventricular tachycardia mechanisms, with assistance	Demonstrates presence or absence of accessory pathway in patients with supraventricular tachycardia
Level 3 Develops a comprehensive treatment plan for a patient with supraventricular tachycardia including pharmacologic and/or ablative strategies	Discusses with patient pharmacologic and procedural options for supraventricular tachycardia management including a discussion of risks versus benefits of medical therapy versus catheter ablation
Diagnoses arrhythmia mechanisms and performs ablation for supraventricular tachycardias, with assistance	 Interprets results of diagnostic maneuvers and consistently recognizes classic characteristics of typical atrioventricular nodal reentry tachycardia, orthodromic atrioventricular reciprocating tachycardia, and atrial tachycardia, but may misinterpret results when more complex variants are seen Positions catheter and ablates with some assistance
Level 4 Independently develops and executes a treatment plan for a patient with supraventricular tachycardia including pharmacologic and/or ablative strategies	 Independently discusses risks and benefits of ablation versus antiarrhythmic drug therapy in patient with supraventricular tachycardia; elicits preference for ablation due to frequent travel to high altitudes, and coordinates scheduling of procedure
Independently diagnoses arrhythmia mechanisms and performs catheter ablation for supraventricular tachycardias	Obtains access, places catheters, performs mapping and electrophysiology study, diagnoses arrhythmia mechanism, and performs ablation

Level 5 Independently evaluates and treats complex supraventricular tachycardia including complex substrates and specialized populations	Discusses risks and benefits of ablation versus antiarrhythmic drug therapy in a young patient with Fontan physiology and documented atrial flutter; develops ablation plan and strategy, including pre-procedural imaging
Independently adopts novel technology in ablation and performs ablation in high-risk or complex arrhythmias	Learns about new ablation strategy at conference, reads comprehensively regarding the impact of the new procedure, and brings plan to lab to trial for specific case
Assessment Models or Tools	 Case Log Direct observation Multisource feedback Simulation
Curriculum Mapping	•
Notes or Resources	 Zipes DP, Calkins H, Daubert JP, et al. 2015 ACC/HRS/AHA Advanced training statement on Clinical Cardiac Electrophysiology. <i>Circ Arrhythm Electrophysiol</i>. 2015;8:1522–1551 https://www.ahajournals.org/doi/10.1161/HAE.00000000000000014 Page RL, Joglar JA, Caldwell MA, et al. 2015 ACC/AHA/HRS Guideline for the management of adult patients with supraventricular tachycardia. <i>JACC CardioOncol</i>. 2016;67(13) https://www.onlinejacc.org/content/67/13/e27 Textbooks

Examples ◆ Recognizes symptoms of dizziness, syncope, exertional fatigue, and dyspnea on exertion
as potentially due to bradycardia
• Lists sequence of steps of device implant from incision, pocket creation, vascular access, lead manipulation/placement, and incision closure, but not able to perform without significant assistance
Identifies when Holter, event monitor, implanted loop recorder, or exercise test is most helpful in correlating symptoms and bradyarrhythmia
 Assists with steps of device implant such as basic pocket creation, vascular access and lead manipulation but still requires significant assistance to complete steps; closes pocket with occasional assistance
 Discusses risks and benefits of choosing a dual chamber versus a single chamber device in a frail elderly patient, with assistance
 Moves through all steps of device implant with minimal prompting and performs initial device assessment and programming in elderly patient with sinus dysfunction Recognizes need for venogram when vascular access initially unsuccessful
 Formulates plan for right sided device implant after noting arteriovenous dialysis fistula or left upper extremity
Decides on implantation of a leadless device for a patient with atrioventricular nodal disease and high infectious risk
 Moves through steps of device implant without hesitation and troubleshoots and adjust implant strategy based on patient stability and comorbidity; individualizes device programming across a multitude of patient complexities/circumstances
 Independently repositions a pacing lead to another site with better lead parameters Implements protocol to improve timeliness of post-implant chest x-ray

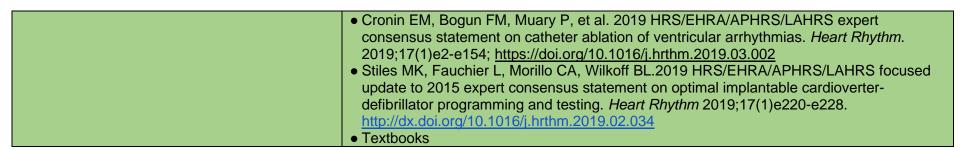

Independently adopts novel technology in pacing	Delivers talk on physiologic pacing and starts program delivering new strategy in electrophysiology lab
Assessment Models or Tools	 Case Log Direct observation Multisource feedback Simulation

Patient Care 4: Syncope and Palpitations Overall Intent: To manage and diagnose syncope and palpitations	
Milestones	Examples
Level 1 Performs a symptom- specific history and physical exam, and develops a differential diagnosis for patients with syncope and/or palpitations and identifies patients, with high-risk features	Performs a history and physical examination in a young patient with exertional syncope, incorporating high-risk features and family history of sudden death
Identifies steps to perform indicated diagnostic testing	Follows a normal baseline EKG with ambulatory monitoring as the next step to arrive at diagnosis
Level 2 Selects and interprets monitoring and additional diagnostic testing to establish a symptom rhythm correlation for a patient with syncope and/or palpitations	Orders and interprets ambulatory monitoring and decides on the need or not for further testing
Performs indicated testing, including diagnostic electrophysiology study and drug challenge; implants loop recorder, with assistance	Performs electrophysiology study in a patient with syncope and conduction system disease, with assistance
Level 3 Identifies diagnosis/etiology of syncope and initiates therapeutic plan for mechanism underlying symptom profile, with assistance	Interprets implanted loop recorder findings and discusses whether the data and history meet guideline criteria for pacemaker implant
Independently implants loop recorder	Implants loop recorder in any patient without assistance
Level 4 Independently develops and adapts a testing, treatment, and surveillance plan for patient specific diagnosis	Independently develops a plan for loop recorder long-term monitoring in patient with unexplained syncope
Independently performs appropriate testing, including electrophysiology study, or drug challenge	Independently performs comprehensive electrophysiology study
Level 5 Leads an interdisciplinary team for patients with syncope and/or palpitations	Leads rounds with allied health professionals and residents to evaluate patients with syncope
Assessment Models or Tools	 Direct observation Multisource feedback Simulation

Patient Care 5: Ventricular Arrhythmias	
Overall Intent: To manage and diagnose ventricular arrhythmias, including premature ventricular complexes, ventricular tachycardia, and ventricular fibrillation	
Milestones	Examples
Level 1 Performs a disease specific history and physical exam and develops a diagnostic plan for patients with suspected or known ventricular arrhythmia	Performs a history and physical examination in a patient with nonsustained ventricular tachycardia, and develops a differential diagnosis which includes idiopathic ventricular tachycardia, ventricular tachycardia due to ischemic cardiomyopathy, cardiac sarcoid, and arrhythmogenic right ventricular cardiomyopathy
Identifies arrhythmogenic substrate (includes anatomic, functional, and genetic) and potentially reversible factors for ventricular arrhythmia; determines indications for intervention	Evaluates arrhythmogenic substrate in patient with ventricular tachycardia using cardiac magnetic resonance imaging (MRI)
Obtains vascular access, positions catheters, and performs basic electrophysiology evaluation	Obtains venous access and position catheters for basic electrophysiology study, with assistance
Level 2 Selects and interprets monitoring and additional diagnostic testing for a patient with ventricular arrhythmia	Orders a Holter monitor to evaluate premature ventricular contraction burden in patient with symptomatic ventricular ectopy
Initiates antiarrhythmic drugs and therapies to modify underlying arrhythmogenic substrate; assesses device programming	Initiates amiodarone in a patient with implantable cardioverter defibrillator shocks from ventricular tachycardia
Performs diagnostic maneuvers and components of ablation for ventricular arrhythmia, with assistance	Performs entrainment during electrophysiology study for ventricular tachycardia
Level 3 Develops a comprehensive treatment plan including identifying indications for medical, catheter, and/or device-based therapy incorporating shared decision making	Develops a plan for patient with ischemic ventricular tachycardia, leading to implantable cardioverter defibrillator shocks; initiates amiodarone therapy, after patient declines invasive catheter ablation strategy
Individualizes pharmacologic choice for acute or chronic therapy; optimizes cardiac implantable electronic device (CIED) programming with assistance	• Initiates sotalol, after identifying contraindications to amiodarone therapy, in patient with recurrent implantable cardioverter defibrillator therapies, with oversight after discussion with faculty members

Formulates strategies and performs ablation for ventricular arrhythmia in normal hearts, with assistance	Identifies patient with idiopathic ventricular tachycardia and develops an ablation strategy as next treatment option
Level 4 Independently develops and implements a treatment plan for a patient with recurrent ventricular arrhythmia; identifies and manages those at high risk of complication	Develops treatment plan for patient with recurrent implantable cardioverter defibrillator shocks despite amiodarone therapy; orders a cardiac MRI to evaluate substrate in preparation for catheter ablation
Independently individualizes pharmacologic and CIED therapies; escalates choice of therapy options as needed	 Initiates sotalol, after identifying contraindications to amiodarone therapy, and optimizes implantable cardioverter defibrillator programming in patient with recurrent implantable cardioverter defibrillator therapies Identifies patient who would benefit from lead extraction, develops plan for procedure, and discusses risks/benefits/alternatives with the patient
Independently performs ablation for ventricular arrhythmia in patients with or without structural heart disease	Performs idiopathic ventricular tachycardia ablation procedure in its entirety
Level 5 Leads an interdisciplinary team for the management of a patient with ventricular arrhythmia	Leads discussion with electrophysiology and heart failure team for the management of refractory ventricular tachycardia
Independently selects and applies innovative treatment protocols and leads the interdisciplinary care team	Identifies radiation therapy as a treatment option for a patient with recurrent implantable cardioverter defibrillator shocks despite prior multiple ablations in a patient with ischemic ventricular tachycardia
Independently performs ablation for ventricular arrhythmia in the setting of complex and highrisk substrate	Performs ventricular tachycardia ablation with epicardial access in patient with Chagas disease
Assessment Models or Tools	Case Log Direct observation
Curriculum Mapping

	mtps://www.anajodinais.org/doi/10.1101/Oilt.000000000000000

Milestones	Examples
Level 1 Identifies patient populations at risk for sudden cardiac death including familial syndromes and cardiac substrate-based conditions	• Identifies a QTc of 510 milliseconds as a high-risk marker for a patient with syncope
Identifies the steps to implant a defibrillator and can create an incision/pocket, obtain vascular access, and close the incision	Under supervision of an attending physician, creates a pocket, obtains vascular access, and closes incision
Level 2 Selects and interprets monitoring and additional diagnostic testing, including electrophysiologic, genetic, and imaging, for risk stratification for sudden cardiac death	Orders and reviews cardiac MRI findings in context of suspected arrhythmogenic right ventricular cardiomyopathy
Performs elements of defibrillator placement and replacement including implantation of defibrillator system via transvenous and alternative approaches	Assists with steps of device implant such as basic pocket creation, vascular access, and lead manipulation but still requires significant assistance to complete steps; closes pocket with occasional assistance
Level 3 Develops a comprehensive treatment plan including identifying indications for medical, catheter, and/or device-based therapy incorporating shared decision making	Formulates treatment plan for a patient with chronic systolic heart failure that includes consideration of using an implantable cardioverter defibrillator after optimal medical therapy is achieved
Implants a defibrillator system, interprets device parameters, programs device, and applies indications for defibrillation testing, with assistance	Under supervision of an attending physician, performs all the steps to implant an implantable cardioverter defibrillator and programs it to minimize shocks
Level 4 Independently develops a comprehensive treatment plan including identifying indications for medical, catheter, and/or device-based therapy including consideration of defibrillator type and location and long-term implications	 Identifies clinical and high-risk features in a patient with hypertrophic cardiomyopathy, and suggests beta-blocker therapy and subcutaneous implantable cardioverter defibrillator over transvenous implantable cardioverter defibrillator, in order to eliminate vascular complications

Independently implants, assesses, and individualizes programming of the defibrillator system	Independently performs all the steps to implant an implantable cardioverter defibrillator and programs it to minimize shocks using best available evidence
Level 5 Leads interdisciplinary efforts in the prevention and management of sudden cardiac death	Develops treatment plan in conjunction with genetic counseling and/or cardiac surgery for a patient with refractory and recurrent ventricular tachycardia
Independently selects and applies innovative treatment protocols and technology in defibrillator therapy	Independently manages limited vascular access issues in patients requiring implantable cardioverter defibrillator including subcutaneous and surgical implantable cardioverter defibrillator placement
Assessment Models or Tools	Case Log Direct observation
Curriculum Mapping	
Notes or Resources	 Al-Khatib SM, Stevenson WG, Ackerman MJ, et al. 2017 AHA/ACC/HRS guideline for management of patients with ventricular arrhythmias and the prevention of sudden cardiac death. <i>Circulation</i>. 2018;138:e272–e391 https://www.ahajournals.org/doi/10.1161/CIR.00000000000000549 Textbooks

Patient Care 7: Heart Failure Overall Intent: To manage co-existing arrhythmias and heart failure that impact treatment and outcomes	
Milestones	Examples
Level 1 Identifies the relationship between arrhythmia and heart failure	Recognizes onset of atrial fibrillation preceded a heart failure exacerbation
Identifies indications for arrhythmia control and/or need for cardiac resynchronization therapy	Evaluates for left bundle branch block in defibrillator patient with worsening heart failure
Interprets intra-procedural anatomy for cardiac resynchronization therapy	• Identifies various coronary sinus branches including those with higher likelihood of cardiac resynchronization therapy response
Level 2 Selects and interprets monitoring and additional diagnostic testing for a patient with arrhythmia and heart failure	Correlates chronology of atrial arrhythmias and heart failure episodes by cardiac implantable electronic device (CIED) interrogation
Identifies patient comorbidities that impact choice of therapies	Distinguishes QRS morphology and/or cardiomyopathy etiologies to determine likelihood of cardiac resynchronization therapy response
Performs cannulation and venogram of coronary venous system or other cardiac resynchronization therapy targets	Engages the coronary sinus using various tools and identifies available anatomic targets
Level 3 Develops a comprehensive treatment plan for a patient with arrhythmia and heart failure	Plans appropriate medical therapy including anticoagulation and possibly anti-arrhythmic drug or ablation strategies to restore and maintain sinus rhythm for a patient in heart failure
Individualizes pharmacologic and ablation/device therapy for arrhythmia suppression and cardiac resynchronization therapy optimization	Programs cardiac resynchronization therapy system to incorporate electrocardiographic, stimulation, and possibly imaging factors that improve response
Implants cardiac resynchronization therapy device, with assistance	Cannulates coronary sinus, evaluates coronary sinus anatomy, places coronary sinus lead, and completes implanting a CIED
Level 4 Independently develops and adapts a treatment plan for a patient with arrhythmia and heart failure	Schedules elective cardioversion or ablation of atrial arrhythmia that exacerbated heart failure with shared decision making regarding anti-arrhythmic drugs

Independently individualizes pharmacologic and ablation/device therapy for arrhythmia suppression and cardiac resynchronization therapy optimization	Recognizes a cardiac resynchronization therapy non-responder and initiates evaluation of correctible factors
Independently implants cardiac resynchronization therapy device, including in patients with complex anatomy including device upgrades	When coronary sinus methods fail or offer poor targets for resynchronization, identifies alternate cardiac resynchronization therapy techniques
Level 5 Leads interdisciplinary efforts for patients with arrhythmia and heart failure	Leads formation of arrhythmia management plans in conjunction with heart failure specialists and cardiac surgeons
Independently selects and applies innovative treatment protocols	Leads decision making regarding novel cardiac resynchronization therapy techniques
Applies advanced techniques to overcome challenging anatomy	Uses snares, venoplasty, or lead management tools to successfully implant cardiac resynchronization therapy system
Assessment Models or Tools	 Direct observation Medical record review Multisource feedback Simulation
Curriculum Mapping	•
Notes or Resources	Tracy CM, Epstein AE, DiMarco JP, et al.2012 ACCF/AHA/HRS focused update of the 2008 device guidelines for device-based therapy of cardiac rhythm abnormalities. Circulation. 2012;126:1784-1800 https://www.ahajournals.org/doi/pdf/10.1161/CIR.0b013e3182618569

Patient Care 8: Procedural Complications Overall Intent: To independently manage complications associated with clinical cardiac electrophysiology procedures	
Milestones	Examples
Level 1 Recognizes clinical symptoms and signs of common peri-procedural complications from ablation or CIED implantation	Assess hemodynamics, respiratory measures, and level of consciousness during any procedure Identifies post-operative hematoma
Identifies symptoms of pericardial tamponade	Orders echocardiogram to assess for effusion in patient with post-procedural hypotension
Level 2 Evaluates routine peri-procedural complications and conditions	Assesses for neurological, hemodynamic, and vascular complications post atrial fibrillation ablation
Identifies therapeutic options for hemodynamic compromise	Develops monitoring plan for patient with new small post-procedure pericardial effusion
Level 3 Manages complex peri-procedural complications and conditions	Diagnoses and determines need for chest tube for pneumothorax
Manages pericardiocentesis, with assistance	Obtains necessary tools and imaging guidance to perform pericardiocentesis with concurrent treatment of reversible factors, such as anticoagulation
Level 4 Anticipates, mitigates, and manages peri-procedural problems in patients with complex conditions	Assesses benefits and risks of transseptal versus retrograde aortic approach prior to ventricular tachycardia ablation
Independently manages pericardiocentesis and/or escalates to multidisciplinary rescue interventions, as indicated	Accesses the pericardial space independently to drain a pericardial effusion
Level 5 Develops a clinical pathway for prevention and management of peri-procedural problems	Develops order set or risk stratification tool to manage peri-procedural anticoagulation
Assessment Models or Tools	 Case Log Direct observation Medical record review Multisource feedback Simulation

--------------------	---

Patient Care 9: Ambulatory Care Overall Intent: To optimize acute and chronic cardiac arrhythmia and cardiac implantable device management	
Milestones	Examples
Level 1 Identifies requirements for follow-up of patients with arrhythmic conditions, including those with modifiable risk factors, antiarrhythmic drug therapy, anticoagulation, and ambulatory monitoring	Identifies medications on patient list with clinically significant interactions with amiodarone
Describes important elements of ambulatory CIED device management	• Interrogates CIED with attention to patient symptoms, arrhythmic events, lead integrity, and system longevity
Level 2 Manages routine ambulatory care and incorporates multidisciplinary care, with oversight	Screens, counsels, and refers an atrial fibrillation patient for sleep study, as indicated
Manages routine CIED follow-up, including remote monitoring and surveillance for arrhythmias, identification of CIED complications, and optimization of cardiac resynchronization therapy, with oversight	 Reprograms CIED to improve longevity or cardiac resynchronization therapy response Turns tachyarrhythmia therapies off and considers arrhythmic risk while awaiting replacement of a fractured implantable cardioverter defibrillator lead
Level 3 Manages complex ambulatory care and incorporates multidisciplinary care, with oversight	Coordinates anti-arrhythmic drug initiation, heart failure management, and hospitalization for ventricular tachycardia storm
Manages complex CIED follow-up, including remote monitoring and surveillance for arrhythmias, identification and management of CIED complications, and optimization of cardiac resynchronization therapy, with oversight	Reviews risks and benefits of and implements medical vs. ablative therapy for ventricular tachycardia with recurrent implantable cardioverter defibrillator shocks
Level 4 Independently manages ambulatory care of patients with arrhythmia disorders, including those with multiple comorbidities	Identifies and manages recurrent atrial arrhythmias post atrial fibrillation ablation through ambulatory telemetry
Independently manages complex CIED follow- up, including remote monitoring, optimizing cardiac resynchronization therapy, developing	Engages in shared decision making regarding maintenance of implantable cardioverter defibrillator therapy at the time of routine battery depletion and indicated replacement

two atmospherical partitions of the project of the partition of the partit	
treatment plan for arrhythmias, and identification	
and mitigation for long-term CIED complications	Develope and to be and to be to idea (if a manage of a strict fibrilla Comme Contact)
Level 5 Advances quality of clinical practice by	Develops systems-based tools to identify, manage, or refer atrial fibrillation patients with
developing protocols for improved management	modifiable conditions that benefit from care of other subspecialists
of patients with arrhythmias and other	
comorbidities

Curriculum Mapping

Medical Knowledge 1: Arrhythmia Diagnostic Testing and Interpretation Overall Intent: To integrate diagnostic testing and interpretation of results to understands the pathophysiologic mechanisms of arrhythmias **Milestones Examples** Level 1 Correlates normal cardiac • Identifies EKG characteristics and relevant anatomy for diagnosis of an outflow tract electrophysiology and anatomy with arrhythmia premature ventricular contractions mechanisms Interprets results of common diagnostic testing • Integrates cardiac MRI data to exclude structural heart disease relevant to CIED/arrhythmia management Level 2 Correlates both normal and pathological • Localizes origin of ventricular tachycardia in a patient with prior myocardial infarction cardiac electrophysiology and anatomy with using 12 lead EKG arrhythmia mechanisms Interprets complex diagnostic information • Identifies Q-waves on baseline EKG as an identifier of prior myocardial infarct explains relevant to CIED/arrhythmia management the etiology of ventricular arrhythmias Level 3 Identifies electrophysiologic • Identifies a Brugada pattern on baseline EKG to assist in diagnosis of origin of ventricular mechanisms and integrates with diagnostic arrhythmia testing • Orders thyroid function tests to rule out the presence of hyperthyroidism in a patient with paroxysmal atrial tachycardia Synthesizes complex diagnostic information • Integrates results of electrophysiology study, history of myocardial infarction and syncope, accurately to reach high-probability diagnoses for electrophysiologic assessment and attempts to induce ventricular tachycardia Level 4 Applies new scientific advancements to Applies a recent publication to diagnosis of an arrhythmia knowledge base Anticipates and accounts for errors and biases Recognizes that no therapy is required after induction of a non-specific arrhythmia in an electrophysiology study when interpreting diagnostic tests • Develops a new diagnostic protocol for risk stratification of a ventricular arrhythmia to Level 5 Advances knowledge of new and emerging diagnostic tests and interpretation predict sudden cardiac death Assessment Models or Tools Direct observation End-of-rotation evaluation • Evaluation of conference participation Performance on in-service examination. Publication/Presentation review

Medical Knowledge 2: Critical Thinking and Decision Making Overall Intent: To diagnose arrhythmic presentations and disorders and appropriately adapt treatment plans	
Milestones	Examples
Level 1 Incorporates key elements of patient history and clinical data into an accurate patient assessment	Lists a differential diagnosis for palpitations
Lists therapeutic options for common clinical presentations	Lists treatment options for syncope
Level 2 Develops an analytic, prioritized differential diagnosis for common presentations	Creates a complete differential for palpitations in several different clinical scenarios
Explains risks, benefits, and alternatives of standard therapeutic options	Discusses risks and benefits of medical versus invasive management of supraventricular tachycardias
Level 3 Develops a prioritized differential diagnosis for complex presentations	Creates a differential diagnosis for syncope in patients with structural heart disease
Justifies optimal therapeutic option based on individual patient presentation and patient preferences	Explains rationale for medical management of obstructive sleep apnea in patient with atrial fibrillation
Level 4 Synthesizes information to reach high probability diagnoses with re-appraisal as needed	Synthesizes history, physical and diagnostic testing in syncope with mild left ventricular systolic dysfunction and conduction system disease
Develops therapeutic plan for patients with complex presentations and uncommon disorders	Creates therapeutic plan for a patient with unexplained syncope and a family history of sudden cardiac death
Level 5 Mentors peers and leads clinical team in critical thinking and decision making	Presents medical grand rounds discussion on stroke prevention in patients with atrial fibrillation
Mentors peers and leads clinical team in optimal therapeutic approaches to patient care	Leads a multidisciplinary team to care for patients with atrial fibrillation and modifiable comorbidities
Assessment Models or Tools	Direct observation
	 End-of-rotation evaluation Evaluation of conference participation
	Performance on in-service examination

	Publication/Presentation reviewStructured case review
Curriculum Mapping	
Notes or Resources	Textbooks

Medical Knowledge 3: Electrophysiology (Cellular Physiology, Pharmacology, Mechanisms) Overall Intent: To understand basic cellular physiology that underlies cardiac arrhythmogenesis and therapy		
Milestones	Examples	
Level 1 Identifies key clinical electrophysiology and pathophysiology concepts (e.g., refractory periods, autonomic control, repolarization, arrhythmia mechanism, remodeling)	Identifies infra-Hisian block on electrophysiology study in patient with myotonic dystrophy	
Identifies key basic science concepts (e.g., cellular electrophysiology, ion channels, anatomy, pharmacology, genetics)	Recognizes QRS widening as a result of Class IC antiarrhythmic use	
Identifies key biophysical principles in ablation and devices (e.g., ablation, pacing, defibrillation, electromagnetic interference)	Explains the relationship between contact force and radiofrequency ablation lesion formation	
Level 2 Explains key clinical electrophysiology and pathophysiology concepts	Describes how long-short sequences impact refractory periods and potentiate arrhythmia induction	
Explains key basic science concepts applicable to electrophysiology	Describes the effect of hyperkalemia on the 12 lead EKG and arrhythmogenesis	
Explains key biophysical principles in ablation and devices or other arrhythmia therapies	Explains the effect of antiarrhythmic drugs on defibrillation threshold	
Level 3 Applies key clinical electrophysiology and pathophysiology concepts	Determines accessory pathway effective refractory period during electrophysiology study	
Applies key basic science concepts applicable to electrophysiology	Uses isoproterenol to increase conduction velocities and shorten refractory periods to facilitate arrhythmia induction	
Applies key biophysical principles in ablation and devices or other arrhythmia therapies	Differentiates electromagnetic interference from pathophysiologic findings on CIED interrogation	
Level 4 Integrates key clinical electrophysiology and pathophysiology concepts into care	Combines exercise EKG with genetic testing to characterize risk for patients with prolonged QTc interval on EKG	
Integrates key basic science concepts applicable to electrophysiology into care	 Identifies the I_{to} channel blocking property of quinidine as the therapeutic mechanism to treat ventricular arrhythmias in a patient with Brugada syndrome 	

Integrates key biophysical principles in ablation and devices or other arrhythmia therapies into care	Initiates of sotalol in a patient with elevated defibrillation threshold and failed implantable cardioverter defibrillator shocks
Level 5 Develops or researches new electrophysiology concepts	Plays an integral role in initiating a clinical trial of a new antiarrhythmic agent
Develops or researches key basic science concepts applicable to electrophysiology	 Validates novel pacing maneuver in electrophysiology lab Identifies of a new genetic variant present in a family with hypertrophic cardiomyopathy
Develops or researches key biophysical principles in ablation and devices or other arrhythmia therapies	Publishes on new energy sources for cardiac ablation
Assessment Models or Tools	 Direct observation End-of-rotation evaluation Evaluation of conference participation including Journal Clubs Performance on in-service examination Publication/Presentation review
Curriculum Mapping	•

Medical Knowledge 4: Scholarly Activity Overall Intent: To identify knowledge gaps, design and implement a plan for investigation, and disseminate the findings of scholarly work **Milestones Examples** Level 1 Identifies knowledge gaps open to • After reviewing the literature, identifies lack of evidence to guide care in a specific clinical scholarly investigation scenario Level 2 Designs a scholarly activity, with • With assistance of a mentor, outlines a hypothesis and designs a research protocol to assistance investigate Level 3 Implements scholarly work, including • Participates in the implementation of a research protocol and analysis of results Publishes case report critical appraisal and analysis of project data • Writes an abstract and presents a poster at a local educational forum Level 4 Produces scholarly work for dissemination as an abstract or presentation **Level 5** Dissemination or implementation of • Publishes research in peer-reviewed journal independent scholarly work that has generated new medical knowledge, educational programs, or process improvement **Assessment Models or Tools** Direct observation • Evaluation of conference participation Publication/Presentation review **Curriculum Mapping** Textbooks Notes or Resources

Systems-Based Practice 1: Patient Safety and Quality Improvement (QI)		
Overall Intent: To engage in the analysis and management of patient safety events, including relevant communication with patients, families, and health care professionals; to conduct a QI project		
Milestones	Examples	
Level 1 Demonstrates knowledge of common patient safety events	Describes an event in which a medication was not given as appropriate	
Demonstrates knowledge of how to report patient safety events	Demonstrates familiarity with the institutional reporting system	
Demonstrates knowledge of basic quality improvement methodologies and metrics	Discusses the steps of a QI protocol	
Level 2 Identifies system factors that lead to patient safety events	Identifies that computer order entry and team communication are factors for a missed medication	
Reports patient safety events through institutional reporting systems (simulated or actual)	Reports missed medication in the institutional reporting system	
Describes quality improvement initiatives at the institutional or departmental level	Describes an initiative to develop an order set to avoid medication error	
Level 3 Participates in analysis of patient safety events (simulated or actual)	Prepares for morbidity and mortality presentations	
Participates in disclosure of patient safety events to patients and families (simulated or actual)	Participates in communication with patients/families about an adverse event	
Participates in quality improvement initiatives at the institutional or departmental level	Participates in a QI project, but may not have designed a QI project yet	
Level 4 Conducts analysis of patient safety events and offers error prevention strategies (simulated or actual)	Collaborates with a team to lead the analysis of a patient safety event	
Discloses patient safety events to patients and families (simulated or actual)	Competently communicates with patients/families about an adverse event	

Demonstrates the skills required to identify, develop, implement, and analyze a quality improvement project	Initiates a QI project within the cardiology division or department
Level 5 Actively engages teams and processes to modify systems to prevent patient safety events	Competently assumes a leadership role at the institutional or community level for patient safety
Role models or mentors others in the disclosure of patient safety events	Leads a simulation exercise to disclose adverse events
Creates, implements, and assesses quality improvement initiatives at the institutional or community level	Completes a QI project and implements changes within the institution
Assessment Models or Tools	Chart or other system documentation by fellow Direct chart or other system.
	 Direct observation Documentation of QI or patient safety project processes or outcomes
	E-module multiple choice tests
	 Multisource feedback QI or morbidity and mortality (M and M) conference evaluation
	Simulation

Systems-Based	Practice 2: System Navigation for Patient-Centered Care	
Overall Intent: To effectively navigate the health care system, include the interdisciplinary team and other care providers, and adapt care to		
a specific patient population to ensure high-qua		
Milestones	Examples	
Level 1 Demonstrates knowledge of care coordination	Identifies the various members of the health care team and defines their roles	
Identifies key elements for effective transitions of care	Lists the essential components of an effective sign-out and care transition	
Level 2 Coordinates care of patients in routine clinical situations, effectively using the roles of the interprofessional teams	Contacts health care team members for routine cases, but requires supervision to ensure all necessary referrals, testing, and care transitions are made	
Performs effective transitions of care in routine clinical situations	Performs a routine case sign-out but still needs guidance and direct supervision to identify and appropriately triage cases or calls	
Demonstrates general knowledge of financial, cultural, and social barriers to adherence of care	Identifies components of social determinants of health and how they impact the delivery of patient care	
Level 3 Coordinates care of patients in complex clinical situations, effectively using the roles of their interprofessional teams	Uses care coordinators to help prevent patients with paroxysmal atrial fibrillation from frequent admissions	
Performs effective transitions of care in complex clinical situations	Performs safe and effective transitions of care with clinical service at shift change	
Identifies financial, cultural, and social barriers to adherence of care to specific populations	Knows which patients are at high risk for specific health outcomes related to health literacy concerns, cost of testing or therapy, LGBTQ status, etc.	
Level 4 Role models effective coordination of patient-centered care among different disciplines and specialties	Role models and educates students and junior team members regarding the engagement of appropriate interprofessional team members and ensures the necessary resources have been arranged	
Role models and advocates for effective transitions of care within and across health care delivery systems	Mentors learners on effective transitions from the inpatient to outpatient setting	
Adapts practice to address the financial, cultural, and social barriers to adherence of care	Ensures patients are prescribed medications that can be affordably obtained	

Level 5 Analyzes the process of care coordination and leads in the design and implementation of improvements Improves quality of transitions of care within and	 Works with hospital or ambulatory site team members or leadership to analyze care coordination in that setting, and takes a leadership role in designing and implementing changes to improve the care coordination Works with a QI mentor to identify better hand-off tools for on-call services
across health care delivery systems to optimize patient outcomes	• Works with a Qi mentor to identify better fiand-on tools for on-can services
Leads innovations and advocates for populations with health care inequities	 Designs a social determinants of health curriculum to help others learn to identify local resources and barriers to care and laboratory testing Helps develop telehealth program to ensure that patients in rural areas can be seen by electrophysiology specialists
Assessment Models or Tools	 Case management quality metrics and goals mined from electronic health records (EHRs) Direct observation Evaluation of interdisciplinary rounds for high-risk patients/cases Evaluation of lectures/workshops on social determinants of health or population health with identification of local resources Medical record (chart) review Multisource feedback

Systems-Based Practice 3: Physician Role in Health Care Systems		
Overall Intent: To understand the physician's role in the complex health care system and how to optimize the system to improve patient		
care and the health system's performance Milestones	Examples	
Level 1 Identifies key components of the health care system (e.g., hospital, skilled nursing facility, finance, personnel, technology)	 Recognizes that hospitals, skilled nursing facilities, and technology are components of the health care system and describes different payment systems, such as Medicare, Medicaid, Veterans Affairs (VA), and commercial third-party payers 	
Describes basic health payment models, (e.g., government, private, public, uninsured care) and practice models	Shows understanding of how the differences between payment models influences patient preferences and access	
Level 2 Describes how components of a complex health care system are interrelated, and how this impacts patient care	Describes how improving patient satisfaction improves patient care and disease management	
Delivers care with consideration of various health care payment models	Selects anticoagulation medication taking into consideration the options within the specific patient's health insurance plan	
Demonstrates essential skills for documentation required for independent practice (e.g., electronic health record, documentation required for billing and coding)	Completes a note template following a routine patient encounter and applies appropriate coding in compliance with regulations	
Level 3 Discusses how individual practice affects the broader system (e.g., length of stay, readmission rates, clinical efficiency)	Works with the hospital system to minimize turnaround time in the electrophysiology laboratory	
Engages with patients in shared decision making, informed by various health care payment models	Forms a therapeutic plan taking into consideration the patient's out-of-pocket expenses	
Seeks knowledge in non-clinical topics needed for independent practice (e.g., malpractice insurance, government regulation, compliance)	Attends educational programs on accurate medical billing for electrophysiology procedures	
Level 4 Manages various components of the complex health care system to provide efficient and effective patient care and transition of care	Uses electronic communication tools for effective transition of care to another health care provider	

Advocates for patient care needs (e.g., community resources, patient assistance resources) with consideration of the benefits and limitations of various health care payment models	Adopts use of patient assistance programs for drug prescriptions by pharmaceutical companies
Applies knowledge in non-clinical topics needed for independent practice	 Identifies modifier codes to improve the accuracy of documentation for electrophysiology procedures
Level 5 Advocates for or leads systems change that enhances high-value, efficient, and effective patient care and transition of care	Advocates for increased deployment of automatic external defibrillators within strategic places within the hospital and the community
Participates in health policy advocacy activities	Participates in activities of the American Heart Association to support government interventions that promote health
Educates others in non-clinical topics to prepare them for independent practice	Lectures to division/department on topics such as medical billing/coding, ethics, and risk management
Assessment Models or Tools	 Direct observation Medical record (chart) review QI project

Practice-Based Learning and Improvement 1: Evidence-Based and Informed Practice Overall Intent: To incorporate evidence and patient values into clinical practice	
Milestones	Examples
Level 1 Demonstrates how to access and use available evidence to manage a patient with an arrhythmia disorder	Obtains evidence-based guidelines for management of atrial fibrillation
Level 2 Articulates clinical questions and elicits patient preferences to guide evidence-based care	Asks symptom-driven and goals-of-care questions of a patient with atrial fibrillation
Level 3 Locates and applies the best available evidence to the care of patients with an arrhythmia while integrating patient preference	 Applies evidence in the care of a patient with symptomatic, atrial fibrillation refractory to antiarrhythmic medications Researches and evaluates relevant comorbidities in the evaluation of a patient with atrial fibrillation
Level 4 Critically appraises and applies available, potentially conflicting evidence to guide care of an individual patient	Researches and synthesizes available data for the role of electrophysiology study in Brugada Syndrome
Level 5 Develops initiatives to educate others to critically appraise and apply evidence for complex patients and/or participates in the development of guidelines	 Teaches others how to find and apply best practice Participates in the development of practice plans or clinical guidelines on the management of atrial fibrillation Helps write a multi-team policy for the institution to address pacemaker implantation following transcatheter aortic valve replacement
Assessment Models or Tools	 Direct observation Electrophysiology in-service examination QI meetings Review of Presentation/Publications

Practice-Based Learning and Improvement 2: Reflective Practice and Commitment to Personal Growth	
	formation with the intent to improve care; to reflect on all domains of practice, personal
	colleagues and patients; to develop clear objectives and goals for improvement in a learning
plan	Francisco
Milestones	Examples ■ Sets goal to independently interpret results of an electrophysiology study
Level 1 Accepts responsibility for personal and professional development by establishing goals	• Sets goal to independently interpret results of an electrophysiology study
Acknowledges limits and gaps between expectations and performance; demonstrates self-awareness	Acknowledges need to improve skills in device interrogation
Level 2 Demonstrates openness to feedback and performance data in order to form goals	Incorporates attending physician suggestion for interpreting results of an electrophysiology study
Analyzes the factors which contribute to limits and gaps; demonstrates appropriate helpseeking behaviors	Appreciates need to perform a high number of device interrogations to build troubleshooting skills
Level 3 Occasionally seeks feedback and performance data with adaptability and humility	Presents an ablation case to faculty members for discussion and feedback
Creates and implements a learning plan	Devises a learning plan to address need to improve device programming skills for optimizing cardiac resynchronization therapy
Level 4 Systematically seeks feedback and performance data with adaptability and humility	Routinely asks attending about performance and opportunities for improvement
Uses performance data to assess learning plan and improves it when necessary	 Analyzes procedure logs to determine need for tailored procedural experience Analyzes individualized device clinic data to identify patients not programmed to guideline standards
Level 5 Mentors others to seek feedback and performance data	Mentors a resident in preparation of a clinical conference case presentation in how to successfully obtain feedback from attendings
Facilitates the design and implementation of learning plans for others	Develops a method that all fellows can use to document and implement a learning plan based on in-training exam results
Assessment Models or Tools	Direct observation
	End-of-rotation evaluations
	Review of learning plan

Professionalism 1: Professional Behavior and Ethical Principles Overall Intent: To recognize and address lapses as well as opportunities to improve ethical and professional behavior	
Milestones	Examples
Level 1 Identifies and describes potential triggers for professionalism lapses	Recognizes signs of fatigue and impact on appropriate and timely completion of responsibilities
Demonstrates knowledge of ethical principles (e.g., informed consent, advance directives, confidentiality, patient autonomy)	Discusses the basic principles underlying ethics (beneficence, non-maleficence, justice, autonomy) and professionalism (professional values and commitments), and how they apply in various situations (e.g., informed consent process)
Level 2 Demonstrates insight into professional behavior in routine situations	 Acknowledges a lapse without becoming defensive, making excuses, or blaming others Apologizes for the lapse when appropriate and takes steps to make amends if needed Articulates strategies for preventing similar lapses in the future
Applies knowledge of ethical principles to routine situations	 Respects patient autonomy in discussion about decision making for a primary prevention implantable cardioverter defibrillator
Level 3 Demonstrates professional behavior in complex or stressful situations	Behaves respectfully and calmly during an interaction between the health care team and a distraught or angry family member
Recognizes need to seek help in managing and resolving complex ethical situations	Recognizes own limitations and seeks resources to help manage and resolve complex ethical situations such as cessation of implantable device therapy
Level 4 Recognizes situations that may trigger professionalism lapses and intervenes to prevent lapses in self and others	 Models respect for patients and expects the same from others Successfully leads a difficult conversation between the health care team and a distraught or angry family member
Uses appropriate resources for managing and resolving ethical dilemmas (e.g., ethics consultations, risk management)	 Outlines and responds to possible ethical issues when writing and submitting an Institutional Review Board proposal Anticipates the need to seek additional resources to prevent ethical dilemmas
Level 5 Role models exceptional professional behavior	Seeks opportunities to provide appropriate feedback on professionalism to other members of the health care team
Identifies and seeks to address system-level factors that induce or exacerbate ethical problems or impede their resolution	Engages in system-wide efforts to improve professionalism through participation in a work group, committee, or task force
Assessment Models or Tools	 Direct observation Multisource feedback Oral or written self-reflection (e.g., of a personal or observed lapse, ethical dilemma, or systems-level factors)

	Simulation

Professionalism 2: Accountability/Conscientiousness	
Overall Intent: To take responsibility for one's cas recognizes and manages potential conflicts of	own actions and the impact on patients and other members of the health care team, as well
Milestones	Examples
Level 1 Takes responsibility for failure to complete tasks and responsibilities, identifies potential contributing factors, and describes strategies for ensuring timely task completion in the future	Responds promptly to reminders from program administrator to complete procedure and work hour logs, and sets calendar reminders to submit
Recognizes the principles of conflict of interest in relationships with industry and other entities	Understands the potential conflict of interests in relationships with pharmaceutical and device companies
Level 2 Performs tasks and responsibilities in a timely manner with appropriate attention to detail in routine situations	Completes procedure notes and post-procedure orders before leaving the electrophysiology lab
Recognizes personal potential conflicts with industry	Understands that receiving books and other educational resources from pharmaceutical and device companies may lead to a conflict of interest
Level 3 Performs tasks and responsibilities in a timely manner with appropriate attention to detail in complex or stressful situations	Appropriately communicates events and recommendations for care following an emergent procedure
Seeks assistance in managing personal relationships with industry and other entities to minimize bias and undue influence in practice	 In collaboration with peers and supervisors, reviews and critiques promotional materials provided by pharmaceutical and device representatives Follows institutional policies regarding relationships with industry
Level 4 Recognizes situations that may impact others' ability to complete tasks and responsibilities in a timely manner	Takes responsibility for timely coordination of all parties involved in a complex electrophysiology procedure
Identifies, discloses, and manages relationships with industry and other entities to minimize bias and undue influence in practice	Independently reviews and critiques promotional materials provided by pharmaceutical and device representatives
Level 5 Mentors others to complete tasks and responsibilities in a timely manner	 Identifies and addresses team/system issues that impede efficient completion of patient care tasks (e.g., setting up a meeting with the nurse manager to streamline patient discharges)
Assessment Models or Tools	Compliance with deadlines and timelinesDirect observation

	Multisource feedback Self-evaluations and reflective tools
Curriculum Mapping	
Notes or Resources	 O'Gara PT, Ness DL, Harold JG. Medical professionalism and the American College of Cardiology. <i>JACC CardioOncol</i>. 2015; 65(5) https://www.onlinejacc.org/content/65/5/503 Code of conduct from fellow/resident institutional manual Expectations of residency program regarding accountability and professionalism

Professionalism 3: Self-Awareness and Well-Being Overall Intent: To identify, use, manage, improve, and seek help for personal and professional well-being for self and others	
Coordin moonin to labelling, abo, manago, impro	
Milestones	Examples
Level 1 Recognizes the importance of personal and professional well-being	Schedules time for self-care
Level 2 Independently recognizes status of personal and professional well-being	Identifies signs of burnout and recognizes that institutional resources are available
Level 3 With assistance, proposes a plan to optimize personal and professional well-being	Uses digital tools to address sources of burnout
Level 4 Independently develops a plan to optimize personal and professional well-being	Independently uses institutional resources to develop action plans for continued personal and professional growth and limit stress and burnout
Level 5 Participates in a system change to improve well-being in self and others	Mentors patients and colleagues in self-awareness and establishes health management plans to limit stress and burnout
Assessment Models or Tools	 Direct observation Group interview or discussions for team activities Individual interview Institutional online training modules Participation in institutional well-being programs Self-assessment and personal learning plan
Curriculum Mapping	•
Notes or Resources	 This subcompetency is not intended to evaluate a resident's well-being. Rather, the intent is to ensure that each resident has the fundamental knowledge of factors that impact well-being, the mechanism by which those factors impact well-being, and available resources and tools to improve well-being. Interpersonal and Communication Skills 1: Patient- and Family-Centered Communication	
	nd behaviors to form constructive relationships with patients, identify and mitigate
communication barriers; engage in effective sha	Examples
Level 1 Demonstrates respect and establishes rapport in patient encounters	Self-monitors and controls tone, non-verbal responses, and language Asks questions to invite patient/family participation
Knows barriers to effective communication (e.g., language, disability, health literacy, cultural, personal bias)	Lists health literacy as a common communication barrier
Identifies the need to adjust communication strategies to achieve shared decision making	Avoids medical jargon when talking to patients
Level 2 Establishes a therapeutic relationship in routine patient encounters	Develops a professional relationship with patients/families, with active listening and attention to communication barriers in patient and family encounters
Identifies barriers to effective communication in patient encounters	Schedules interpreter to be present during patient and family meeting when English is not the patient's preferred language
Organizes and initiates communication with patient/family to facilitate shared decision making	Takes the lead in organizing a meeting time and agenda with the patient, family, and consulting teams; begins the meeting, reassessing patient and family understanding
Level 3 Establishes a therapeutic relationship in challenging patient encounters, with assistance	Identifies how personal biases may impact the patient-doctor relationship Defuses anger of unhappy patient with some attending assistance
Attempts to minimize communication barriers, including reflection on any personal biases	Reflects on implicit biases when prompted
Uses shared decision making to implement a personalized care plan, with assistance	Elicits what is most important to the patient and family, and acknowledges uncertainty in the medical complexity and prognosis
Level 4 Independently establishes a therapeutic relationship in challenging patient encounters	Navigates a challenging therapeutic relationship when patient and family have conflicting priorities
Proactively minimizes communication barriers and independently manages personal biases	Identifies a bias against patients who do not address their modifiable risk factors

Independently, uses shared decision making to implement a personalized care plan Level 5 Mentors others in situational awareness and critical self-reflection to consistently develop positive therapeutic relationships	 Engages in a shared-decision-making process with the patient and family, in an elderly patient who declines a pacemaker Develops a workshop for colleagues in self-awareness and reflection to improve therapeutic relationships with patients
Role models self-awareness to minimize communication barriers	Role models proactive self-awareness and reflection around explicit and implicit biases with a context specific approach to mitigate communication barriers
Role models shared decision making	Is an example to others of leading shared decision making to arrive at consensus
Assessment Models or Tools	 Direct observation Multisource feedback Self-assessment including self-reflection exercises Standardized patients or structured case discussions

Interpersonal and Communication Skills 2: Interprofessional and Team Communication

Overall Intent: To effectively communicate with the health care team, including consultants, in both straightforward and complex situations

Milestones	Examples
Level 1 Respectfully receives a consultation request	Shows respect through words and actions when receiving calls for assistance
Uses language that values all members of the health care team	 Uses respectful communication in all interactions Listens to and considers others' points of view, is nonjudgmental and actively engaged, and demonstrates humility
Level 2 Respectfully and thoroughly completes consultations with effective documentation and communication in common cases, with assistance	Communicates clearly and concisely in an organized and timely manner during consultant encounters, as well as with the health care team in general
Communicates information effectively with all health care team members	Uses clear, concise, organized and timely oral and written communication
Participates in team-based discussions to optimize team performance	Participates in multidisciplinary discussions to advance patient care plans
Level 3 Completes consultations with effective documentation and communication in common cases, with assistance	Performs consult for a patient with atrial fibrillation and rapid ventricular rates and communicates recommendations to the team with oversight
Adapts communication style to fit team needs	Uses respectful strategies to assess understanding of the consultation question
Initiates team-based discussions to optimize team performance	Arranges and facilitates multidisciplinary discussions regarding treatment
Level 4 Completes consultations with effective documentation and communication in complex cases	Performs detailed consult and ensures management for a patient with ventricular tachycardia storm in the critical care unit
Coordinates recommendations from different members of the health care team to optimize patient care	Communicates recommendations effectively and in a timely manner with primary care and other referring or collaborating members of the health care team, coordinates with electrophysiology lab on procedural timing

Facilitates team-based discussions to optimize team performance	Arranges and contributes to multidisciplinary discussions regarding treatment for complex cases
Level 5 Uses consultations as educational opportunities to improve clinical care	Includes evidence-based references when completing consultation notes
Role models flexible communication strategies that value input from all health care team members, resolving conflict when needed	Guides others in organizing effective team meetings to resolve conflict
Facilitates regular health care team-based	Organizes debrief after an unexpected patient death
feedback in complex situations	Respectfully provides feedback to more junior members of the medical team for the purposes of improvement or reinforcement of correct knowledge, skills, and attitude
Assessment Models or Tools	• Direct observation
	Medical record (chart) review
	Multisource feedback Simulation
Curriculum Mapping	• Simulation

Interpersonal and Communication Skills 3: Communication within Health Care Systems Overall Intent: To effectively communicate using a variety of methods		
Milestones	Examples	
Level 1 Accurately records information in the patient record and safeguards patient personal health information	 Notes are accurate but may lack organization and include extraneous information Shreds patient notes after rounding as one method of maintaining HIPAA compliance 	
Level 2 Demonstrates organized diagnostic and therapeutic reasoning through notes in the patient record	Notes are organized and accurate but may still contain extraneous information	
Identifies appropriate communication channels (e.g., cell phone/ pager usage, medical record, email) as required by institutional policy	Identifies proper methods for sharing results needing urgent attention	
Level 3 Concisely reports diagnostic and therapeutic reasoning in the patient record	Documentation is accurate, organized, and concise, but may not consistently contain anticipatory guidance	
Respectfully communicates concerns about the system	Communicates opportunities for EHR interface improvement	
Level 4 Independently communicates timely information in a written format and verbally when appropriate	 Writes a clear and concise note that includes anticipatory guidance and verbally transmits critical information to a colleague Knows when to call the treating team about unexpected or critical findings of clinical significance 	
Uses appropriate channels to offer clear and constructive suggestions to improve the system	 Participates in house staff QI committee to update policy for anticoagulation for cardioversion Recognizes when a communication breakdown has happened and respectfully brings the 	
Level 5 Models written communication to improve others' performance	 issue to the attention of the attending Leads a task force established by the hospital QI committee to develop a plan to improve house staff hand-offs 	
Guides departmental or institutional communication around policies and procedures	Teaches colleagues how to improve discharge summaries	
Assessment Models or Tools	 Direct observation Medical record (chart) review Multisource feedback
