

Case Log for Hand Surgery Fellows Updates

Review Committee for Plastic Surgery

In response to the need for more clearly defined hand surgery procedures/categories for fellows, the Review Committee, in collaboration with the Review Committee for Plastic Surgery and the American Society for Surgery of the Hand [ASSH] hand fellowship directors, prepared what it hopes will be a vast improvement with meaningful categories.

In summary, all of the upper extremity codes have been rearranged into appropriate headings; "other" has been subdivided into respective component categories; and all major procedures included in the Case Log System reflect the current Program Requirements.

The detailed report will be available in the ACGME Case Log System (login required), as well as on the [Orthopaedic Surgery section of the ACGME website](#).

Email questions to Review Committee staff members, contact information for whom can be found on the [Plastic Surgery section of the ACGME website](#).
